INVESTMENT OBJECTIVE OVER A 3 YEAR HORIZON

RETURN : US LIBOR+7-10%

RISK : 12-14%

DESCRIPTION

The QLAB Quadrant L/S index represents a 3rd generation commodity index solution that seeks to offer stable absolute returns compared to the commodity and CTA hedge fund space. The economic exposure to commodities varies between 50% - 100% driven by a proprietary short term horizon risk budgeting process. The index uses QLAB's proprietary Conviction Score Model to select L/S commodity exposures from its opportunity set where investor sentiment is strong or weak. The index updates its allocation periodically and weights are driven by a combination of conviction score and risk, where higher risk penalises weight. Index exposures are utilising QLAB DCRM to maximise performance by systematic selection of commodity futures contracts.

PERFORMANCE

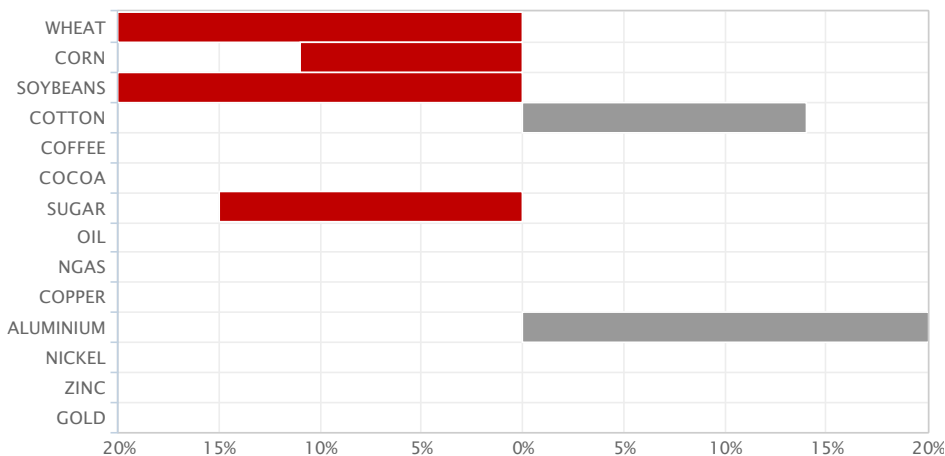

RETURNS: Annualised if > 1Y

RISK: Annualised standard deviation (volatility) 10Y

MDD: Maximum drawdown peak-to-trough, 10Y

CURRENT ALLOCATIONS

■ Long Exposure
■ Short Exposure

LONG EXPOSURE: 34%
SHORT EXPOSURE: -66%
